**Hiring Manager**  
Codeology

I am writing to express my interest in the Junior Developer position currently available at your company. I am confident that my academic history and aptitude and work experience for creative problem-solving will be an invaluable addition to your existing team. I was overjoyed to learn of the possibility of joining a creative and ambitious group of people who are working to create something brand new.

FROM

**Siddhartha Pradhan**  
Associate Software Engineer

As a computer science student along with experience of working in the industrial level, I have gained experience in various programming languages and have worked on a variety of projects both academic as well as professional. Data structures, algorithms, programming and databases have all been staples of my education, along with software engineering which was then applicable during my working experience. I have participated in several group projects during my academic career, therefore I am comfortable working in a team environment and making meaningful contributions. As a .NET developer, I was also exposed to an industrial service, which helped me learn how to code efficiently and debug while also training me how to operate efficiently in cross-functional teams.

I understand the importance of communication and collaboration in a cross-functional team and have demonstrated this ability in previous positions. I am confident that I can bring these skills to your startup and contribute to the success of your team.

I am confident in my ability to adapt to new situations and learn quickly, which I believe are essential qualities for a junior developer in an environment where innovation and experimentation are encouraged. I am confident that my technical skills and enthusiasm for software development will be a valuable asset to your team.

Thank you for considering my application. I look forward to the opportunity to discuss my qualifications further.

Sincerely,

Siddhartha
